

ECLIPSE

LOUD AND CLEAR

Personal Conference Phone

ECLIPSE YOUR PERSONAL CONFERENCE PHONE

CLEAR SPEECH

Speakerphones have many advantages, but using them is seldom satisfying. Distorted sound, lost words, questions to be repeated and misunderstandings, are some of the annoying problems. Now, you finally have a choice: Eclipse gives you all the advantages a speakerphone is intended to have. With Eclipse you can use your phone and have both hands free to use your PC, find papers or files, etc., while talking on the phone. You may ask your co-workers to participate, or you may even walk around in your office while you speak.

Speakerphones on the market usually operate in half duplex, which means that you must talk and listen alternately and cannot do both at the same time. Interruptions cause problems. The person with the loudest voice always wins.

With Eclipse this problem is eliminated, because the sound travels in both directions at the same time - also called full duplex operation. This is made possible due to the «state-of-the-art» technology. Using Eclipse is almost like talking face to face.

USE IT WITH ANY TYPE OF PHONE

Eclipse connects to your phone in the same way a headset does. You can use it with analogue, ISDN, IP or system phones, and even GSM and mobile DECT phones with headset or hands-free outlets.

EXPANSION WITHOUT CABLES

Eclipse is small enough to be placed next to your phone and large enough to provide excellent quality. In larger rooms it can easily be expanded with wireless satellite units - this enhances the sound quality, because the microphones pick up the signal at a close range and also reduce background noise to a minimum. The satellites use rechargeable batteries and a unique infrared voice link to communicate with the Eclipse Master. The infrared link is designed to operate on reflections from walls and ceiling, allowing the satellites to be positioned anywhere in the room. They do not require a «direct line» to the master. The unit's remote control allows you to individually adjust the sound level and mute the microphones.

FULL FREEDOM

With Eclipse power pack and a GSM or mobile DECT phone, you can use Eclipse just about anywhere. There is no need to hook up to a phone wall sockets or look for a power outlet. Enjoy the loudspeaking qualities of Eclipse anywhere in your office, at home, or when travelling.

AN INVESTMENT WITH EXCELLENT PAYOFF

Eclipse is your personal conference phone, which is easy, fun, and convenient to use. You may once in a while substitute a business trip for a teleconference, and save time and money. Eclipse pays for itself from the savings of a single business trip.

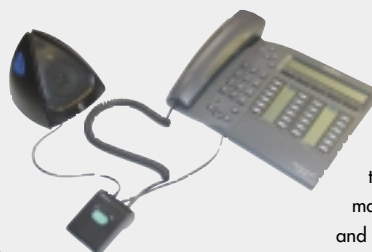

DESIGN AWARD

Eclipse received the Norwegian Design Council's design award for its attractive appearance and good functionality. Try it yourself and experience the difference.

ECLIPSE - IT SPEAKS FOR ITSELF

Design: Tore Ommedal

Eclipse connects to the phone in the same way as a headset does. The switch box selects between Eclipse and the telephone handset, and you may at any time switch back and forth between them.

Some phones provide a dedicated headset outlet for connecting Eclipse directly to the phone.

Eclipse is designed as a personal conference phone and connects to any type of phone – analogue, ISDN and system phones.

With Eclipse you have the freedom to choose between the handset and hands-free conversations. Hook Eclipse up to your phone just as you would with a headset. Use a switch box if the phone itself does not provide a headset output.

Our unique infrared voice link allows expansion with unique wireless, rechargeable satellite units. Multipoint distribution reduces sound reflection from walls and ceiling, permitting a lower overall audio level. Background noise is also kept at a minimum, with each participant being closer to the microphone. The satellites automatically switch themselves on and off.

Get rid of cables snaking across floors and tables. Eclipse may be expanded with completely wireless satellite units. Place them around the conference desk and enjoy a more natural conversation with an evenly distributed sound. With the microphone closer to each participant, the person(s) at the other end of the line will hear you much more clearly.

Combining this with an Eclipse Power Pack and a mobile DECT phone, you are no longer dependent upon a power outlet or phone wall socket.

Eclipse may even be used with mobile DECT phones, provided they have a headset output. Using Eclipse Power Pack, you can even forget about the power outlet as well.

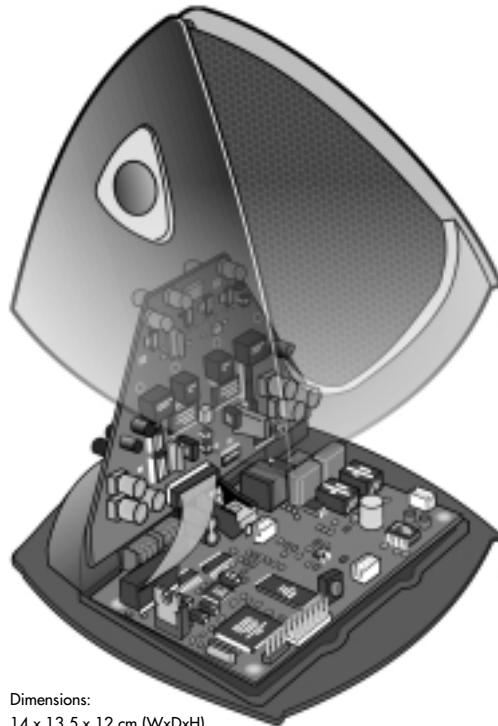

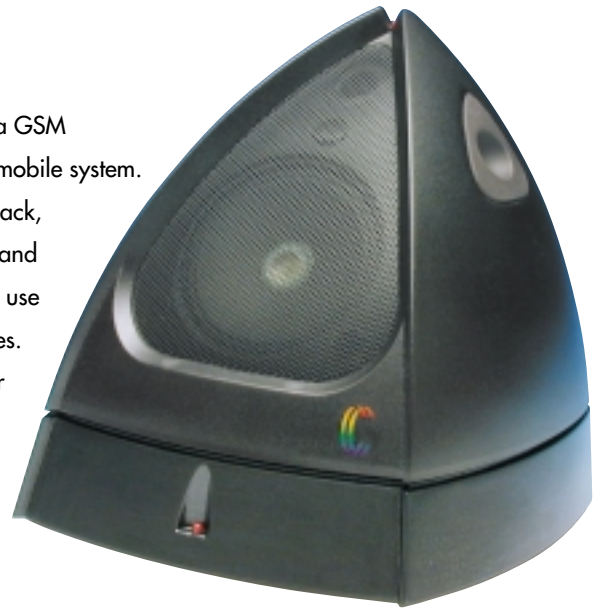

Eclipse connects to any GSM phone prepared for a hands-free set. Combine it with Eclipse Power Pack, and you have the freedom to host conferences just about anywhere.

ECLIPSE POWER PACK

The Eclipse Power Pack combined with a GSM or DECT phone gives you a completely mobile system.

Place and click Eclipse onto the Power Pack, connect it to your GSM or DECT phone and you are up and running with 4-5 hours' use before you need to recharge the batteries.

The power pack includes both a charger and battery monitoring circuits.

Dimensions:
14 x 13,5 x 12 cm (WxDxH)

ECLIPSE - More Than Just a "Speaker"

Inside Eclipse you find the master board with a powerful digital signal processor (DSP). It is this unit - with its sophisticated software - that makes full duplex conferencing possible. As a result, both the speaker and the microphone are active simultaneously - you can speak and listen at the same time. The vertically mounted board communicates to and from the satellites via the unique infrared voice link.
